

Rani and her brother Rishi asked their parents if they could have two rabbits. Their parents said they would buy the rabbits, their living area and a book about rabbit care, and pay for pet insurance; but Rani and Rishi would be responsible for looking after the rabbits and buying everything they need.

Their auntie and uncle said they would buy them a food bowl, water bottle and bottle brush, a rabbit brush and some toys as a birthday present.

Between them, Rani and Rishi have £20 per week pocket money.

Find out the cost of each item, work out how many are needed each year, and calculate the total cost per year for each item.

Work out how much money Rani and Rishi need to keep each week from their pocket money to care for the rabbits.

Find out the cost of everything that rabbits need. You could search at [petsathome.com](https://www.petsathome.com)
